Simplicity

Under a strategic arrangement with Scissero, Mayer Brown offers clients streamlined documentation production and filing for their structured products. Using AI-powered technology, clients benefit from a seamless process that paves the way for offerings with lower notional amounts and increasingly tailored returns. The result is a documentation workflow that is faster, more efficient, and designed to keep pace with the evolving demands of the structured products market.

The Benefits of Automation and AI for Structured Products

For issuers, offering documentation has long been the final bottleneck to straight-through processing. By producing documentation that is verified against approved templates, this removes that bottleneck – opening the door to further growth of the U.S. structured products market, smaller per-trade notionals, and lower per-trade costs.

The solution brings together complementary capabilities: Scissero provides the legal workflow platform, which performs an automated comparison of generated documents against Mayer Brown-approved templates and pre-approved trade parameters. Mayer Brown lawyers confirm that the conditions for each opinion are satisfied and deliver every opinion. WSD's innovative Document Automation NextGen (DANG) platform provides the underlying agentic document automation technology and EDGAR conversion capability, generating deterministic, fully verifiable, and regression-tested documentation.

A True Straight-Through Processing Workflow

For structured notes for which documents were prepared by Mayer Brown and approved by the issuer, certain in-scope, repeat trades can be produced through the platform.

The workflow operates to promote confidence:

+ Pre-trade

Ongoing review of template code, functional and load testing, and the design, development, and upkeep of regression tests to ensure system integrity before any trade is processed.

+ Trade time

Verification that trades qualify to be generated from the platform and that generated documents meet and match pre-agreed templates and trade data inputs followed by legal review.

+ Post-trade

Validation of generated documents to ensure outputs remain within tested and approved parameters.

Predictable, Scalable Process

Clients engage directly with Mayer Brown, benefiting from the full power of the automated platform without needing a separate technology relationship.

These benefits are expected to be applicable to exempt offerings, European structured products, structured unit investment trusts (UITs), and defined outcome products, broadening the reach of the solution.

Background

Mayer Brown

With over 1,800 lawyers worldwide, Mayer Brown is a global law firm with offices across the Americas, Asia, Europe, and the Middle East, advising many of the world's largest financial institutions and corporations on their most complex transactions and disputes.

Mayer Brown has a preeminent derivatives and structured products practice. We have one of the only international structured products platforms, bringing together leading structured products practitioners, with decades of experience, to provide clients with integrated advice. In the United States, we are a leader in structured products offerings, advising on billions in USD of structured notes by financial institutions. In Europe, we advise leading issuers of structured products from our London and Frankfurt offices. Our lawyers advise on establishing, modifying and maintaining programs; securities law compliance; banking law compliance; executing transactions; tax analysis and disclosure; and structuring assistance.

The team is ranked globally for derivatives and structured products by *Chambers & Partners*, *IFLR1000*, and *The Legal 500*. Mayer Brown has been named Americas Law Firm of the Year at the *GlobalCapital* Derivatives Awards for the last four years in a row, most recently in 2025, and six times in the last eight years. The firm was also named Best Law Firm at the *Structured Retail Products* 2025 SRP Americas Awards.
